Building Systems. Creating Opportunities

Final Project: The Interactive Customizer

Nony Corp - Web Design Cohort II **Deadline: October 21, 2026**

Project Objective

For your final project, you will build an interactive webpage where a user can configure and customize a product or service. When the user selects different options, the page must dynamically update to reflect their choices and calculate a final total. You will be graded on your HTML structure, CSS styling, and JavaScript logic.

Technical Requirements

- **HTML Structure:** Create a responsive two-column layout. The left column will house the customization options (buttons, dropdowns, or radio inputs). The right column will display the live summary and final calculated total.
- **CSS Styling:** The application must look professional and complete.
  - Use Flexbox or CSS Grid for layout (No Bootstrap or external libraries).
  - Implement hover states for all interactive elements.
  - Ensure clear visual hierarchy (headings, spacing, contrast).
- **JavaScript Logic:**
  - Write event listeners that trigger when a user clicks an option.
  - Update the DOM dynamically to display the selected choices as a text list.
  - Calculate a running total (e.g., price, stats, or score) based on the selections.
  - Include a "Reset" button that clears all choices and resets the total to zero.

Important Anti-Plagiarism Rule

Every student has been assigned a unique business domain. Your HTML classes, ID names, and JavaScript variable names must strictly reflect your assigned topic. Using generic variables (like `item1`) or variables from another student's domain (like `pizza_price` if you are building a car app) will result in an automatic failure.

Recommended Timeline

Oct 14 – 15	**Oct 16 – 18**	**Oct 19 – 20**	**Oct 21**
HTML skeleton and	JavaScript event	DOM updates and	Final styling polish

Domain Assignments

Find your name or student ID below to see your assigned project domain. You must build your application specifically for this topic.

Student #	Project Domain	Customization Options (Left Column)	Required Output (Right Column)
Student 1	**The Pizza Builder**	Size (Small/Med/Large), Crust Type, 4 Topping buttons (Meat/Veggie).	List of selected ingredients and Total Order Price.
Student 2	**Custom Sneaker Designer**	Base Color, Lace Color, Sole Type, Material (Canvas/Leather).	Text description of the shoe style and Total Price.
Student 3	**Custom PC Builder**	Processor (i5/i7/i9), RAM Size (8GB/16GB/32GB), Storage Size.	"Sp ecs List" of chosen parts and Total Rig Cost.
Student 4	**Smoothie Bar Menu**	Base Liquid (Milk/Water), 3 Fruit choices, Protein Add-on (Yes/No).	"Ingredients Cup" list and Total Calories (not price).
Student 5	**Car Trim Configurator**	Paint Color, Wheel Style, Interior Material (Cloth/Leather).	List of car features and Final Dealership Price.
Student 6	**Vacation Package Builder**	Destination (Local/International), Hotel Star Rating, 3 Excursions.	Travel Itinerary list and Total Trip Cost.
Student 7	**RPG Character Creator**	Character Class (Warrior/Mage), Weapon Type, Armor Type.	List of gear and Total "Attack" and "Defense" stat points.
Student 8	**Burger Joint Menu**	Patty Type (Beef/Chicken/Veg), Cheese selection, 3 Sauce options.	Receipt of selected burger layers and Total Cost.
Student 9	**Bicycle Customizer**	Frame Style (Mountain/Road), Handlebar grip color, Tire tread type.	List of bike components and Final Retail Price.
Student 10	**Gym Plan Builder**	Membership Tier (Basic/Pro), Personal Trainer (Yes/No), Class Pass.	Summary of gym perks and Total Monthly Subscription Fee.

Grading Rubric (100 Points)

Your project will be evaluated based on the following criteria. Ensure all elements are fully functional before submission.

Category	Criteria	Points
HTML Structure	Semantic tags used correctly. Clean two-column layout structure. Inputs and output areas clearly defined with appropriate IDs and Classes matching the assigned domain.	**/ 20**
CSS & Layout	Responsive layout using Flexbox or Grid. Professional aesthetic. Hover effects present on clickable items. No external CSS libraries used.	**/ 30**
JavaScript Logic	Event listeners trigger correctly. DOM updates accurately reflect user clicks. Mathematical logic for the total price/score is accurate and updates dynamically. "Reset" button fully clears the application.	**/ 30**
Domain Accuracy & Anti-Cheat	Application strictly follows the assigned domain. Variable names in JavaScript and Class/ID names in HTML reflect the specific topic (e.g., `let swordPower` instead of `let variable1`).	**/ 20**

Submission & Video Requirements

To successfully graduate from Nony Corp's Web Design Cohort II, you must complete the following steps by **11:59 PM on October 21, 2026**:

1. **Email Submission:** Send an email to **nonycorp@gmail.com** containing your repository link. In the email, explain why you chose your specific project implementation and what you intend to do with it.
2. **Video Presentation:** Record a video showcasing your final project. Walk through the UI and briefly explain the JavaScript logic powering your application.
3. **Social Media:** Post your video on LinkedIn celebrating the completion of Cohort II. You **must tag @nonycorp** in your post. We also encourage you to share and tag us on Instagram and X (Twitter)!
